

CSE 202 Final Part (a)

Olcay Taner YILDIZ

I. QUESTION (LINKED LIST) (15 POINTS)

Write the method

```
void printOddNodes()
```

which prints the contents of the odd indexed nodes (1, 3, ...) in the linked list.

II. QUESTION (TREE) (15 POINTS)

Write a recursive function that finds the number of non-leaf nodes in the binary search tree.

```
int numberOfNonLeafNodes()
```

III. QUESTION (GRAPH, SORTING) (15 POINTS)

Write a function that finds the median weight in a weighted graph. Write the function for adjacency matrix representation.

```
int medianWeight()
```

IV. QUESTION (SORTING) (15 POINTS)

Suppose you are given three sorted arrays A, B, and C. Write a function that returns the number of elements which are in A, B, and C.

```
int inABC(int[] A, int[] B, int[] C)
```
