

COMP 4107 Midterm 3

Olcay Taner YILDIZ

I. COUNTRIES AND THEIR LANGUAGES

Create an application that stores the countries and the languages spoken in those countries in a database.

- Country Table:
 - Country name: Text
 - Country population: Integer
 - Country main language: Language
 - Country secondary language: Language
- Language Table:
 - Language name: Text
 - Language family: Text

Your application will have three activities.

- The first activity contains four tabs:
 - The first tab will have one list view. With this tab, the user can view information (name and main language of that country) about all countries.
 - The second tab will have one list view. With this tab, the user can view information (only the name of language) about all languages.
 - The third tab will have four TextViews ("Name", "Population", "Main Language", "Secondary Language"), two EditTexts (For country name and population), two Spinners (For main and secondary languages), and one button ("Add country"). With this tab, the user can add a country to the country table. The Spinners must get language names from the Language table.
 - The fourth tab will have two TextViews ("Name", "Family"), two EditTexts (For language name and family), and one button ("Add language"). With this tab, the user can add a language to the language table.
- The second activity contains four TextViews ("Name", "Population", "Main Language", "Secondary Language"), two EditTexts (For country name and population), two Spinners

(For main and secondary languages), and three buttons ("Save Changes", "Go Back", "Delete Country"). The Spinners must get language names from the Language table. With this activity, the user can modify information about a country or delete the specific country.

- The third activity contains two TextViews ("Name", "Family"), two EditTexts (For language name and family), and three buttons ("Save Changes", "Go Back", "Delete Language"). With this activity, the user can modify information about a language or delete the specific language.
